

## Important information — Königsplatz

### Timeline

|                    |                                                                                                                                                                          |                     |
|--------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|
| <b>Setup</b>       | September 2–6, 2027                                                                                                                                                      | daily 06:00–22:00 h |
| <b>Event</b>       | September 7–11, 2027                                                                                                                                                     | pred. 10:00–20:00 h |
|                    | September 12, 2027                                                                                                                                                       | pred. 10:00–17:00 h |
|                    | The VDA reserves the right to change the opening hours during the IAA MOBILITY 2027 if necessary, taking into account the interests of the organizer and the exhibitors. |                     |
| <b>Dismantling</b> | September 12, 2027                                                                                                                                                       | pred. 18:00–22:00 h |
|                    | September 15–18, 2027                                                                                                                                                    | daily 06:00–22:00 h |

Depending on the size and design of the booth, shorter set-up and dismantling times may be specified.

### Power supply

Max. 400 W are available per m<sup>2</sup> stand space.

The cable routing is planned individually and is always via the corridor. The final planning is carried out after an overall site inspection.

It may be necessary to route cables through other areas to supply individual stand areas.

### Water supply

Water and waste water are available.

The discharge points are determined individually by the Site Manager. The pipes are always routed via the corridor. The final planning is carried out after an overall site inspection.

It may be necessary to route pipes through other areas to supply individual stand areas.

### Floor load

The permissible point load on a base area of 50 cm by 50 cm (distance approx. 1.50 m) is 5 t (50 kN, ground pressure 200 kN/m<sup>2</sup>).

### Floor protection

To protect the existing floor, all exhibition areas will be provided with floor protection. This will be implemented exclusively by Messe München GmbH. The costs will be invoiced to exhibitors according to the area concerned.

The contours of the stand areas are adapted to the floor protection grid. Detailed planning is coordinated via the Site Manager.

### Construction height

Maximum construction and advertising height: 10 m

Deviating construction heights are checked individually.

### Logistics

At Königsplatz there are no areas available for temporary storage or other use outside the rented stand areas.

**Tools and materials may only be stored within the rented booth space. This must be taken into account when planning the booth design.**

Loading and unloading takes place exclusively in the designated logistics areas.

### The following apply to all spaces

The [Organizational & Technical Guidelines IAA Open Space](#)
